DETAILED ACTION

1. This Office Action is responsive to the Applicant's Amendment filed on November 16, 2007. Claims 1-2, 4-6, 8-9 and 11-18 are currently pending in the Application.

Allowable Subject Matter

2. Claims 1-2, 4-6, 8-9 and 11-18 allowed, and renumbered as 1-15

Reason for allowance

3. The following is an examiner's statement of reasons for allowance: the present invention related to a method and an apparatus to drive an organic electroluminescent display device that control the voltage power provide to a driving transistor of the display to increase the uniformity of the motion image. The closest prior art of Miyazawa (U.S Patent No. 6,858,991) shows a similar system which also having a driving circuit that control the voltage supplied to the driving transistor of the electroluminescent display. However, Miyazawa fails to discloses, inter alia;

In reference to claim 1,

a power control driver supplying a power voltage to a source terminal of the first driving thin film transistor through the power line, the power voltage having an On value during an emitting time section of a single frame and an Off value during a rest time section of the single frame, wherein the first driving thin film transistor is turned on when the On value and the Off value are applied to the organic electroluminescent diode during the emitting time section and the rest time section, respectively.

In reference to claim 6,

a power control driver supplying a power voltage to the power line, the power voltage having an On value during an emitting time section of a single frame and a-second an Off value

during a rest time section of the single frame, wherein the driving thin film transistor is turned on when the On value and the Off value are applied to the organic electroluminescent diode during the emitting time section and the rest time section, respectively.

In reference to claim 13,

applying an On value of a power voltage through a source terminal of the driving transistor to an organic electroluminescent diode that is connected to a drain terminal of the driving transistor during an emitting time section of a single frame;

applying a second an Off value of the power voltage through the source terminal of the driving transistor to the organic electroluminescent diode during a rest time section of the single frame,

wherein the driving thin film transistor is turned on when the On value and the Off value are applied to the organic electroluminescent diode during the emitting time section and the rest time section, respectively.

This distinct feature has been added to independent claims and renders them allowable.

4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
